

Bulldog B-SMART Wireless Battery Monitors

Positively powering your battery optimization program

SIMPLE • LABOR-EFFICIENT • COST-EFFECTIVE

Don't let battery issues take down your operation

Once your batteries begin showing signs of reduced performance, it's probably too late to recover lost productivity and the usable life and performance of the battery has likely been diminished.

Traditional preventive maintenance programs have attempted to maximize battery life and performance, but require inefficient, labor-intensive practices that drain productivity and uptime:

- Taking each lift truck out of operation (even those not requiring maintenance)
- Removing the battery
- Manual inspection and measurement of voltage, electrolytes and water levels

The costs of traditional preventive maintenance programs can add up quickly. Now there's a better way...

Our **battery optimization program** powered by B-SMART wireless battery monitors is designed to save your operation both time and money by identifying issues before they affect your operations, all without disrupting your workflow.

Here's how it works:

- 1** We'll schedule regular visits to your facility to gather data from all in-service batteries. No need to stop operations. All of our batteries are enabled with the latest in wireless battery monitoring technology.
- 2** Our technician will download the data from each battery in service, then prepare a detailed optimization report identifying which batteries require service and what needs to be done.
- 3** Our battery optimization team will work with you to schedule and perform maintenance at the opportune time, limiting operational interruptions and improving uptime.

Why B-SMART?

Maximized operational life

Consistent battery performance

Reduced maintenance costs

Increased uptime

Less labor required

To begin optimizing your battery fleet, talk to your Bulldog Battery dealer today.

POSITIVELY POWERING YOUR WORLD

About Bulldog B-SMART Wireless Battery Monitors

Our battery optimization program is powered by the B-SMART wireless battery monitoring system, which comes standard on every Bulldog battery. The B-SMART monitoring system:

Tracks vital information

- Battery performance parameters
- Voltage, temperature and current
- Measurements during charge, discharge and idle states
- Charge intervals

Logs relevant data

- Changes in battery performance vs. established parameters
- Stores up to 10,000 events per battery

Transfers data wirelessly

- Information for every battery is available for reporting and analysis
- Eliminates the need to pull individual batteries for assessment

Our wireless battery monitor isn't just smart...

It's Bulldog SMART

Specific: optimize your battery fleet

Measurable: data-driven insights

Achievable: realistic recommendations

Relevant: tailored to your operation

Timely: no unnecessary operational interruptions

To begin positively powering your operation and optimizing your battery fleet, contact your Bulldog Battery dealer today to select the right program for your operation.
